

ZpeSouce.com believes that information is power. And in the correct hands beneficial to a greater good. We hope that you enjoy some of the many documents we have on our website. Many of these documents are to the best of our knowledge -one of a kind- in their original format, written by some of the best inventors and researchers in the Zero Point field.

We do not guarantee that the information is correct, but hope to provide you with an outlet for the largest datastore of this type of information. With your support we will be able to keep the information current, concise and readily available to research.

That said, ZPESource welcomes you to the Zero Point!

Dr. Harold Aspden
Department of Electrical Engineering
University of Southampton
Southampton SO9 5NH England

December 4, 1990

Dear Harold,

I am writing this letter at the request of Mr. Floyd 'Sparky' Sweet. He and I have discussed what course of action should be used to produce a patent application for his 'Phase Conjugate Vacuum Triode' (PCVT), the name was coined by Tom Bearden who has worked closely with Sparky for more than five years during the machine's development.

Mr. Leonard Holihan has spoken highly of you, in particular concerning your 'massaging' of Spence's patent, so that it would get through the U.S. Patent Office with a minimum of problems.

At the present time Sparky is being financed by Mr. Bill Lawry. We believe there are adequate funds available to immediately compensate you for any effort you can provide.

It is our desire to get the patent written, and applied for between now and the first of August, 1991. We believe it undesirable to apply for a U.S. patent due to known cases of suppression of energy machines by the U.S. government, and the U.S. Patent office public statements that they will not grant patents for purported machines that do not obey the accepted laws of physics.

Tom Bearden has said in the past that he could write the patent. Tom's workload is always very heavy and we are unsure of how much he could accomplish during this time frame. The August 1, 1991 date for filing is really cast in concrete.

Sparky would like to pay your travel expenses and salary for you to come to Los Angeles to visit him at the proposed start of your effort.

Sparky intends to prepare a paper describing his machine in detail that will be presented at the 26th. annual IEC&C Energy Conversion Conference, Boston Massachusetts August 4-9, 1991, hopefully with Tom Bearden doing the talking.

If you feel that you could (would) be able to support this effort, we would appreciate receiving from you a funding and milestone schedule to accomplish the tasks required in the necessary time frame. We are presently thinking of having a Los Angeles area patent attorney corporation actually file
